

**FORGOT TO SEND IN ON TIME, left it on G-drive.**

## **Hampus Edeland - Week 5**

### **What do I want to learn or understand better**

I've learnt a bit of Firebase and Firestore, but not on a good enough level to use it on my own. I would like to learn a bit more, more on a personal level seeing that the project is coming to a close, at least the user stories connected to Firebase and Firestore.

I would also like to be better at defining user stories. There's a lot of existing user stories that have to be redefined when incorporated in a sprint. Making the schedule for your personal and partner programming slots is a bit hard, to estimate the time it takes to complete a subtask or user story.

### **How can I help someone else, or the entire team, to learn something new?**

I have to say that I'm mostly the one getting help when coding together. But I've learnt a few things and ways of working from the more experienced members. I teach those things to another team member if they want to. I had to learn a lot of new ways of coding, therefore I picked up some stuff from videos and such, that I try to share.

Sharing good sites or videos for information is good aswell.

### **What is my contribution towards the team's use of Scrum?**

Helping build the scrum board, checking list of tasks and trying to define user stories in a way. Also re-/defining for whom the user story is made for, programmers/PO and such. Trying to lead the weekly meetings in a way, though it's easy since everyone is focused at the meetings. Attending meetings such as sprint reflection and upstart.

### **What is my contribution towards the team's deliveries?**

Trying to help other user stories, defining and such. Also working on the assigned user stories with my labpartner. I didn't finish all my tasks this week. A better way of estimating personal velocity is needed on my part. The bachelor thesis has taken a lot of time, unfortunately affecting the other team members.
