

Week 7- Hampus Edeland

What do I want to learn or understand better?

This week is mostly about finishing small tasks, like bug-fixing or small problems. Mostly using the things I've learnt earlier in the course for solving these small tasks. This week I'll have worked with several team members on solving tasks. I mostly want to learn from the others on how to test and find bugs in an efficient manner. I've found it hard. Learn to prioritize tasks to finish when close to the deadline. In earlier courses it's been binary, either you're finished or not.

How can I help someone else, or the entire team, to learn something new?

Mostly getting help with the things mentioned above. Helping if there are any bugs with the US or areas I've worked with, recognizing if there's a problem or not. Helping with ways of prioritizing and structuring.

What is my contribution towards the team's use of Scrum?

Pushing for well defined user stories and tasks. Also attending Scrum meetings, while also structuring parts of them. Communicating with team members and several programming partners. Being part of velocity estimation and taking on the appropriate amount of US compared to the velocity.

What is my contribution towards the team's deliveries?

Finishing the assigned US and tasks, some alone, some with programming partners. Probably finishing all, maybe one wasn't finished, due to its small importance.
