Week 4

What do I want to learn or understand better?

This week we decided to use Firebase authenticator and Firestore. Since I've never used them and my only experience with databases is with SQL I will have to learn them both again. I still want to improve and understand the implementation of Scrum, so the group gets more efficient during meetings and such. Also so I can improve in creating user stories and acceptance criterias.

How can I help someone else, or the entire team, to learn something new?

Helping the entire team through scrum, adding extra responsibility due to the fact that I'm the Scrum master. I'll try to help the team implement Scrum and answer questions if I can. Once I'm more comfortable with Firebase and Firestore, maybe I'll be able to contribute with answers as well.

What is my contribution towards the team's use of Scrum?

Trying to create more well defined user stories and acceptance criteria. Keeping the Trello-board up to date. Always attending meetings. Also as a Scrum master, I'll try to structure the meetings and check what has been done the past sprint. Also helping define the next sprint. Trying to learn new things about scrum, so the team can use it.

What is my contribution towards the team's deliveries?

I've been working together with Elias on the user stories related to the backend. The work with Scrum and structuring work. Documenting and such. After learning Firebase and Firestore, helping contribute to the user stories dependent on Firestore and Firebase. Helping with design, using Figma and collaborating with the frontend-workers.
