Hampus Edeland - Week 6

What do I want to learn or understand better

Last week I misunderstood that one component of Firestore wasn't complete. So I'll try to learn to implement firestore queries for the final tasks. I've gotten better at defining user stories, leading to less rework in them. It's also easier to estimate velocity when the user stories are better defined. Also easier to plan your time, completing a user story per timeslot. I would like to find another KPI for my personal contribution. Maybe it's too late to implement. Feels like you could implement a version of scrum in other group projects, outside IT. For example it could've been really useful in my bachelor thesis.

How can I help someone else, or the entire team, to learn something new?

Like the past few weeks, I'm the one getting the most help. Trying to help by teaching things with firestore. Watching tutorials has helped me understand some things better, showing those things to other team members. If the things are too complicated or things that I don't grasp enough I will try to send a video or site for the subject. .

What is my contribution towards the team's use of Scrum?

Like past weeks, maintaining and creating existing/new user stories has been a contribution. Trying to create better defined stories. This adds value towards scrum because it's easier to understand the velocity needed for completing the stories. It's also easier to divide tasks among team members, if the stories are decoupled. Defining the stakeholder as well. This week we had another scrum master, so I did not lead the meeting. Attending meetings such as sprint upstart. The advantages of using scrum are starting to dawn on me, when the stories are well defined, it's much easier to work on your own or in pairs.

What is my contribution towards the team's deliveries?

Trying to manage both last week's uncompleted user stories with the new ones I took on with my partner. That being said, my bachelor thesis has been chaotic, which unfortunately has affected my performance this week. I will try to make up for it the remaining weeks. I've adjusted my velocity for this of course, so the next week won't be filled with incomplete user stories from my part. Also I don't want to overburden my partner. With that being said the work we took on will be done for this sprint, maybe one won't be complete. Next week I'll try to help other team members with completing user stories.
